

Advanced Audio Technology plays a vital role on all the fairground's entertainment stages. The stages use a high-tech digital mixing console to balance the sounds for all the acts. The Fair's paging system uses Digital Sound Processors (DSP) to change the analog audio signal into a digital computer language called "Cobra Net." This allows us to transmit the audio signal over fiber optic cable throughout the fairgrounds.

**Technology—amplifying  
your Nebraska State Fair  
experience**
