

WHAT'S
stem
GOT TO DO WITH IT?

Do you ever wonder why so many horses, cows and sheep look alike? It didn't just happen. Over the centuries, we bred certain characteristics like muscle mass and milk and meat production into the animals we raise on our farms. Selective breeding is based on an understanding of the way dominant and recessive genes impact future generations—and provide us with the resources we need to survive.

Genetics, the science of life's building blocks.
